Specifications:

Intake Runners: 200cc Port Dimension: 2.000” x 1.230”
Exhaust Runners: Port Dimension: 1.350” x 1.420”
Combustion Chamber Volume: 64cc or 72cc. See cylinder head part number list for chamber size.
Valve Guides: Integral cast iron guide
Valve Guide Spacing: Ctr-Ctr = 1.900” (Intake stock location / Exhaust is moved .040”)
Valve Seats: Intake = integral cast iron seat, Exhaust = Durabond Powdered metal seat .006” press fit
Valve Seat Dimension: Exhaust = O.D. 1.650” x 1.280 x .375”
Valve Seat Angles: Intake = 38°-(45°(.040”))-60°-75°     Exhaust = 38°(45°(.060))-.500radius-75°
Pushrods: To obtain proper rocker geometry, pushrod length will need to be determined by using an adjustable checking pushrod.
Rocker Arms: Sportsman II heads utilize a standard offset rocker arm designed for the Small Block Chevy.

NOTE: When using rocker arms greater than a 1.5 ratio, it may be necessary to elongate the pushrod guide holes in the cylinder head.

Head Bolts: standard SBC head bolt hardware (ARP bolts134-3601)
Head Studs: standard SBC head Stud hardware (ARP studs 134-4001)
Head Gaskets: Fel Pro 1003. If steam holes are needed for 400 engines, use a 1014 gasket. NOTE: heads are not drilled for steam holes. If steam holes are desired, it is necessary to drill six 1/8 steam holes. To drill, invert the cylinder head with the deck side up. Using a head gasket as a template, center punch the head where the steam holes will be drilled. The three steam holes closest to the intake side of the must be drilled at a 30 degree angle toward the exhaust side of the head. The remaining three steam holes that are closest to the exhaust side of the head will be drilled straight down.

Intake Manifold: any conventional SBC intake manifolds
Pistons: Most 23° aftermarket pistons
Spark Plugs: 460” reach, 5/8” hex plug,

Emissions: To activate for emissions, the cylinder head will need to be disassembled, then you will need a 6 inch long, ¼ diameter drill bit to drill through the heat crossover passage (found in the center of the intake flange) to the exhaust bowl. When the exhaust crossover passage is drilled, this activates EGR operation making this head 50 State emissions legal under E.O. # D-343-1. Then the included exemption sticker MUST by law be placed next to your vehicle’s emission sticker.

Head Bolt Torque Specs:
Torque all head bolts to 75 ft. lbs w/oil. Before torquing, coat the head bolts and rocker studs with a thread sealing paste. Note: Refer to the factory service manual for proper head bolt tightening sequence

Rocker Arm Studs: 45 ft. lbs w/oil

NOTE: Specs are for reference only. Always measure before machining. REMEMBER: MEASURE TWICE, CUT ONCE.

Maximum Valve Diameter: 2.100 Intake & 1.625 Exhaust.

Maximum Spring Seat Depth: Spring seat is cut to accept a 1.550 spring. IT IS NOT RECOMMENDED TO CUT THE SPRING SEAT DEEPER OR TO ENLARGE THE SEAT FOR A SPRING DIAMETER OVER 1.550.

Maximum Spring Diameter: 1.550

Maximum Flat Mill: .040

Maximum Angle Mill: .175
**Approximate Milling Guidelines:** .0065 per 1cc

**Brackets and Accessories:**
1. The Sportsman II heads have accessory bolt holes drilled in the factory locations.
2. Some head part #’s are drilled to accept either perimeter bolt valve cover or center bolt valve cover. However, because the larger diameter of the valve springs used on -2 heads; there may be interference with the bolt supports when using center bolt valve covers. It is HIGHLY RECOMMENDED to use the perimeter bolt style valve cover to eliminate clearance issues.
3. Before installing center bolt valve covers, the perimeter bolt valve cover bosses must be machined down in the inside of the valve cover rail. DO NOT MACHINE THE VALVE COVER RAIL! The two valve cover mounting bosses on the intake side must be machined .220 down from the valve cover rail & the bosses on the exhaust side of the rail must be machined down to a depth of .180.
4. When using Sportsman II heads with the angle plug location, it is best to use an exhaust header designed for angle plugs.

**Before Final Assembly:**
- Please inspect castings for defects or damage prior to modification, assembly or installation. Cylinder heads that have been modified, installed or used ARE NOT RETURNABLE. At this time install the cylinder head to the block with no head gasket and snug the bolts.
- This assembly should be checked to assure that all components are compatible with your combination before assembling your engine. There is no warranty on valve springs of any type.

1. Due to different ratio rockers and different deck height blocks, now is the time to check for pushrod to cylinder head interference. If the pushrod has interference with the cylinder head, remove the head, grind the casting the needed amount. Clean the head after grinding then reinstall the head using the mock up procedure and recheck the clearance. Repeat the procedure as necessary until the desired clearance is achieved.
2. Once everything has been checked and all the desired clearances and specifications achieved, final assembly may begin.
3. If a new flat tappet camshaft is being installed with a-2 cylinder head, it is HIGHLY RECOMMENDED to remove the inner valve spring during the camshaft break in procedure. After the cam is broken in, reinstall the inner valve spring.
4. If you bought bare castings then remember, you must wash the heads before assembly.

**ATTENTION:**
As a safety precaution, due to the nature of all sand castings occasionally an exhaust, valve cover, intake manifold and rocker arm studs may go through into the water jacket or an intake port some are by design. This is rare but can happen and will not always be evident by the naked eye or even sometimes may pass a pressure test. So with that said and to insure that you do not run into a problem of leaks, we recommend that you use thread sealer on these bolts or studs. Better safe then sorry!

**WARRANTY CLAIMS:** (See Warranty Sheet that came with item for specific details)
Contact Customer Service to obtain a Return Material Authorization number directly from World Products for any warranty return. DO NOT CONTACT YOUR DEALER. DO NOT RETURN PARTS WITHOUT AUTHORIZATION. Returned product must be shipped prepaid. Collect shipments will be refused. Returned parts must have RMA number on the outside of the package, a copy of original bill of sale inside and a written explanation of the suspected defect. If the item is found defective, World Products will repair or replace it at its discretion and return it freight prepaid. No additional labor claims will be paid. There will be no exceptions to this rule.
